

# DUAL-CLIMATE WINDOW FILM

**ALPINETINT**

# Keep warm in winter & cool in summer with dual-climate window films.

Dual-climate window films help to improve the insulation value of a common single-pane window with their low emissivity or "Low E" coating. Application of these window films can help the window achieve an insulation value that compares well with double-pane and in some scenarios triple-pane. The key benefit is that these films are much less expensive than replacing windows with double and triple pane.

In the heat of summer, dual-climate window films reduce up to 77% of the sun's heat and up to 52% of radiant heat that enters through windows. In the colder months without film, single pane windows lose 20 times as much heat as the same sized area of an adjacent well-insulated wall, leading to nearly 40% of heating loss. Dual climate can help in retaining up to 48% of the heat from your fire and/or heater.

These films also prevent fading of furnishings blocking up to 99% of the sun's harmful rays and reducing the annoying glare on TVs and computers, enhancing the comfort of your home or other space.

In clear or reflective finishes, you can achieve an aesthetically pleasing look while gaining the great benefits outlined above.

## Heat Rejection

Reject up to 77% of the hot summer sun

## Heat Retention

Reduce winter heat loss by up to 40%

## Fading

Block 99% of UV light that causes fading of your furnishings

## Energy Costs

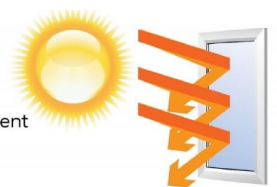

Reduce energy costs by up to 30%

With lifetime manufacturers' warranties and professional installation, you can rest assured you'll get the quality product and finish you deserve.

Professionally installed by AlpineTint, dual-climate window film is the right choice for both the environment and your budget.

## SUMMER BENEFITS

On warm days solar heat is rejected, requiring less cooling to maintain a comfortable environment and save energy.

## WINTER BENEFITS

During winter, heat is reflected back into the room, requiring less heating to maintain a comfortable environment and save energy.
